

Student Management System

SUBMITTED BY: MAHAM TURK

COURSE: COMPUTER / IT

INSTITUTE NAME: BANO QABIL

DATE: 7-FEB-2026

Introduction

Student Management System is a simple project designed to manage student records in an organized way. This system helps to store student information such as name, roll number, class and marks. It reduces manual work and saves time.

Objectives

- ▶ The main objectives of this project are:
- ▶ To manage student data easily
- ▶ To calculate total marks and percentage
- ▶ To reduce paperwork
- ▶ To keep student records safe and organized

Features

- ▶ Store student information
- ▶ Calculate total marks automatically
- ▶ Calculate percentage using formulas
- ▶ Easy to understand and use
- ▶ Saves time and effort

Tools used

- ▶ The following tools are used in this project:
- ▶ MS Word – for project documentation
- ▶ MS Excel – for student data and calculations
- ▶ MS PowerPoint – for project presentation
- ▶ Python – Programming

How the system works

First, student data is entered in an Excel sheet. Then formulas and Python programming logic are used to calculate total marks and percentage. The project details are explained using Word and presented through PowerPoint slides.

Ms Excel sheet

<i>Student data</i>								
Name	Roll No	Class	Math	Science	English	Total Marks	Obt Marks	Percentage
Ali Ahmad	101	10	85	78	90	300	253	84.333333
Sara Khan	102	10	88	85	80	300	253	84.333333
Ahmed Ali	103	10	75	80	85	300	240	80
Ali	104	9	90	80	35	300	205	68.333333
Shayan	105	9	60	85	40	300	185	61.666667
Humsha	106	10	70	88	50	300	208	69.333333
Faraz	107	9	85	75	58	300	218	72.666667
Khurram	108	10	50	90	69	300	209	69.666667
Wahab	109	10	55	60	80	300	195	65
Mehek	110	10	65	70	90	300	225	75
Mudasir	111	9	75	85	77	300	237	79
Sonia	112	9	70	50	68	300	188	62.666667
Muskan	113	9	85	55	59	300	199	66.333333
Fiza	114	10	90	65	55	300	210	70
Sahil	115	10	45	75	77	300	197	65.666667
Hassan	116	10	50	70	85	300	205	68.333333
Sufiyan	117	9	95	85	49	300	229	76.333333
Areasha	118	10	55	45	55	300	155	51.666667
Ayesha	119	9	66	50	78	300	194	64.666667
Janita	120	9	78	95	90	300	263	87.666667

Programming Used (Python)

- ▶ Python programming language is used
- ▶ It takes student data as input
- ▶ Calculates total marks
- ▶ Calculates percentage
- ▶ Displays result

```
▶ name = input("Enter student name: ")
▶ roll = input("Enter roll number: ")

▶ m1 = int(input("Enter marks of subject 1: "))
▶ m2 = int(input("Enter marks of subject 2: "))
▶ m3 = int(input("Enter marks of subject 3: "))

▶ total = m1 + m2 + m3
▶ percentage = (total / 300) * 100

▶ print("Student Name:", name)
▶ print("Roll Number:", roll)
▶ print("Total Marks:", total)
▶ print("Percentage:", percentage)
```

Advantages

- ▶ Easy record management
- ▶ Fast calculations
- ▶ User-friendly
- ▶ Saves time and effort
- ▶ Suitable for schools and institutes

Conclusion

Student Management System is a useful and simple project for managing student records. It helps institutes to maintain student data efficiently. This project is easy to use and suitable for beginners.
